

SME3006 Machine Learning – 2025 Fall

# Introduction to ML

INHA UNIVERSITY

# What is artificial intelligence?

- > An agent that can learn and make decisions through perception, reasoning and inference.

인공지능	
<b>인간적인 사고</b> ‘기계가 인간처럼 생각과 마음을 가지게 하는 것’ (하우겔란드, 1985)	<b>합리적인 사고</b> ‘인지와 추론, 행동을 가능하게 하는 계산의 연구’ (원스턴, 1992)
<b>인간적인 행동</b> ‘인간이 지능적으로 행동해야 하는 것을 수행할 수 있는 기계를 만드는 기술’ (벨만, 1978)	<b>합리적인 행동</b> ‘인공적으로 만들어진 것의 지능적인 행동에 관련된 것’ (닐슨, 1998)
인간의 능력 기준	합리성 기준

▲ 인공지능의 여러 가지 정의

# What is artificial intelligence?

- > An agent that can learn and make decisions through perception, reasoning and inference.
- > Difference between a regular air conditioner and an AI air conditioner

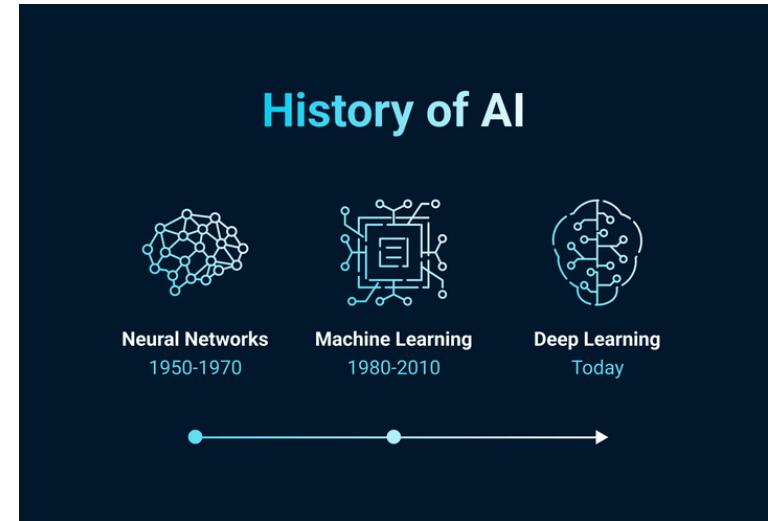

# Acting humanly: the Turing test approach

- > Can a machine think?
- > Turing Test
  - **Natural language processing** to communicate successfully in a human language
  - **Knowledge representation** to store what it knows or hears
  - **Automated reasoning** to answer questions and to draw new conclusions
  - **Machine learning** to adapt to new circumstances and to detect and extrapolate patterns
- > Total Turing Test
  - **Computer vision** and speech recognition to perceive the world
  - **Robotics** to manipulate objects and move about

# History of AI

- > 1950s Perceptron
- > 1980s Back-propagation, Bayesian Network, **Decision Tree**
- > **1990s SVM, Ensemble, EM, RL**
- > **2000s Kernel Methods**
- > 2010s AlexNet, RNN, GAN
- > 2020s Transformer, LLM

# What is machine Learning?

- > Extracting knowledge from data
- > Think of a spam filter
  - Make up a blacklist of words
  - Lots of ‘if’ and ‘else’ decisions to process data
- > Disadvantages
  - The logic required to make a decision is specific to a single domain and task
  - Designing rules requires a deep understanding of how a decision should be made by a human expert
- > Detecting faces in images.

## What can we do with ML?

- > <https://quickdraw.withgoogle.com/>
- > First image of a black hole
- > Early detection of pancreatic cancer
- > OpenAI defeats Dota2 world champions
- > AlphaFold – prediction of a protein's 3D shape (Nobel Prize)

# What can we do with ML?

## Article

# Highly accurate protein structure prediction with AlphaFold

# Types of ML

## Examples of learning problems

- > Recognizing digits in images
- > Identifying tumor in an x-ray
- > Classifying email as spam or not
- > Diagnosing disease from symptoms
- > Predicting the price of a stock 6 months from now
- > Predicting selling price for individual houses
- > Netflix problems – predict rating of a movie by a customer
- > Determining credit-worthiness for mortgages or credit cards
- > Predicting 3D forces on a molecule from molecular formula

## Types of learning problems

- > Classification problems – output is a label from a finite set
- > Regression problems – output is real-valued (continuous)
- > Ranking problems – output only ranks examples relative to one another
- > Unsupervised problems – such as ChatGPT, often used for generative AI

# Syllabus

Week 1	Introduction to ML	Week 9	Decision trees and ensemble methods
Week 2	Data preprocessing / visualization	Week 10	Uncertainty quantification and Gaussian Process
Week 3	Linear and logistic regression	Week 11	Expectation Maximization and GMM
Week 4	Optimization and Gradient descent	Week 12	Generative learning / Hyperparameter tuning
Week 5	Dimension reduction and PCA	Week 13	Anomaly detection
Week 6	SVM and Kernel methods	Week 14	MDP and RL
Week 7	K-means and unsupervised learning	Week 15	Final project presentation
Week 8	Mid-term		

## Lectures will be..

- > Lecture recordings will be provided on YouTube.
- > Language: Python
- > Env. recommendation: Google Colab or Anaconda

## Prerequisite

- > Probability theory
- > Linear algebra
- > Python

# Lecture plan

- > 0 Assignments
  - TA: 허성원 (wen10413@inha.edu)
- > Grade
  - Attendance - (No grade if absences reach one-quarter of total class days.)
  - Assignment 50%
  - Mid-term 20%
  - Final-project 30%
